

LP GAS METER

Gallons Meter for Stationary LP Gas Tanks

General Information

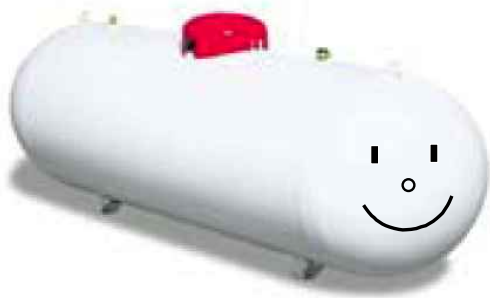

The MIDEGAS V (Volume) meter for stationary LP Gas tanks, measures the tank volume and displays it in gallons and percentage of the total tank's capacity in an easy to read LCD display that can be located inside your home or business.

With the volume of gas in gallons, you can check easily if the bobtail dispatched gallonage is correct.

Also, you can check the LPG daily consumption, as the meter is much more sensitive to volume change than the gauge dial of the stationary tank.

Features:

- +/-1% accuracy with respect to the tank's gauge dial (after calibration).
- Displays gas volume in gallons and percentage.
- Works in any horizontal LPG tank of up to 5,200 gallons capacity and any brand "Junior" type level gauge.
- Works with one 9 volt alkaline battery that last approximately 3 years.
- Function to measure the bobtail's dispatches in gallons.
- Function for calibrating the meter to match exactly in percentage the gauge dial of the stationary tank.

MIDEGAS V

NEW TECHNOLOGY

The digital sensor is installed under the existing tank's gauge dial. It reads 3,800 positions of the tank's level, so it's much more accurate and sensitive to changes in gas volume.

Check the bobtail dispatches and daily (or shift) gas usage and save money.

It measures gallons and percentage with one and two decimal digits, which make it much more accurate than the standard gauge dial.
